

IClicker Cloud

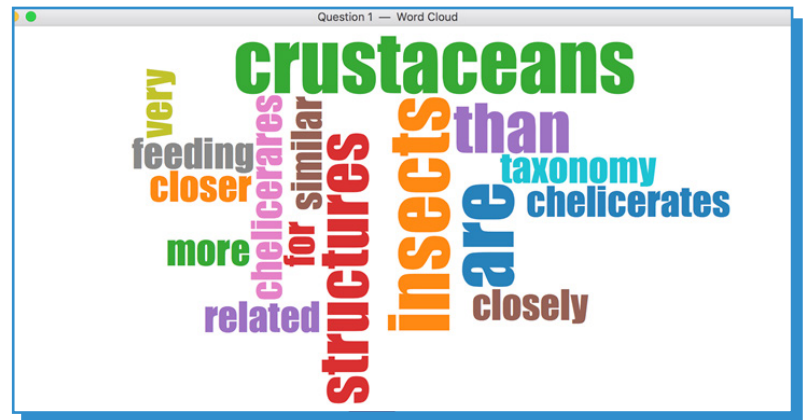

December 2017 Release

This latest release of our iClicker Cloud instructor software includes new features to encourage even more active student participation in your classroom. The highlights include:

STUDENT RESPONSE ENHANCEMENTS

NEW! Word Cloud for Open-ended Questions

Student responses to short answer questions can be shown as a Word Cloud, which provides a highly-visual representation of common themes in students' responses.

End Your Session?

Ending a session will disconnect you from the server. If you end the session with an exit poll, your students will be asked to give post-class feedback.

[Learn more about exit polls](#)

End Session with Exit Poll

End Session

Don't End

NEW! Exit Polling

Once a polling session is ended, instructors will now see an option to ask students an exit poll question. When students provide feedback via exit polling, instructors gain a deeper level of insight into students' understanding of concepts covered in class.

INCREASED INSTRUCTOR CONTROL

NEW! Multi-column Grade Sync

The new multi-column grade sync option allows instructors using iClicker Cloud to sync individual poll and quiz session scores to the school's LMS, which improves visibility into students' performance and engagement in each session.

iClicker Cloud Demo Day Settings

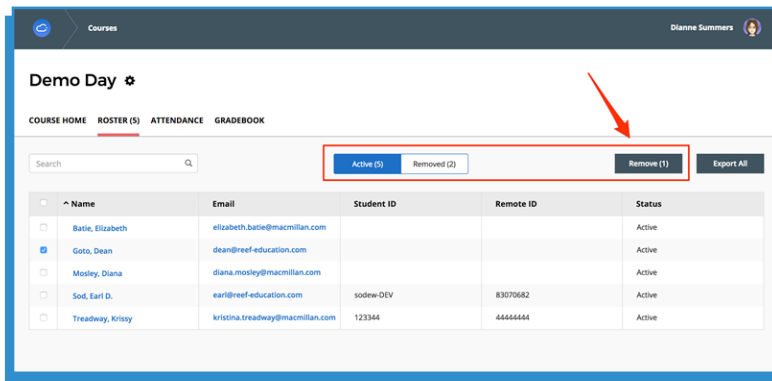

Course Details Grade Sync Clickers Polling Quizzing

After grading, you can synchronize your iClicker scores with your learning management system (LMS) or Macmillan Learning's LaunchPad or Sapling Learning.

You can also export your scores to a CSV file for manual upload into the system of your choice.

- No integrated grade sync (manual export only)
Scores can be exported to a CSV file and imported manually to your LMS or homework system. Each session appears as a separate column in the exported CSV file.
- Single-column grade sync
Scores will upload as an aggregate score within your LMS or homework system. This option uses LTI 1.1 and requires your administrator's help.
- Multi-column grade sync
Scores will upload as a separate entry for each session within your LMS or homework system. This option uses Macmillan Learning's deep integration and requires your administrator's help.

Not sure which grade sync option to choose?

UPDATED! Roster Management from Web App

Students can now be removed from an iClicker course from the web app's Roster page. This update enhances the roster management functionality of the web application to align with the current desktop roster management capabilities.

UPDATED! Managing Session Details

Instructors can now change the name of any Poll, Quiz, or Attendance session from the instructor website.

NEW! Extending Web Sessions

Instructors can now extend the web session before it expires due to inactivity. Also, the session inactivity time has increased from 30 to 60 minutes.

UPDATED! Best Answer Selection

Instructors can now select and send correct best answer responses to students for Short Answer and Numeric questions with multiple correct responses.
